Anxiety & Phobia Workbook Edmund J. Bournes 2009-08-31 Research conducted by the National Institute of Mental Health has shown that anxiety disorders are the number one mental health problem among American women and are second only to alcohol and drug abuse among men. Approximately 15 percent of the population of the United States, or nearly 40 million people, have suffered from panic attacks, phobias, or other anxiety disorders in the past year. Nearly a quarter of the adult population will suffer from an anxiety disorder at some time during

their life. Yet only a small proportion of these people receive treatment..... It is quite possible to overcome your problem with panic, phobias, or anxiety on your own through the use of the strategies and exercises presented in this workbook. Yet it is equally valuable and appropriate, if you feel so inclined, to use this book as an adjunct to working with a therapist or group treatment program.

The first goal is to explore the difference between fairness and justice in language assessment. The authors distinguish internal and external dimensions of the equitable and just treatment of individuals taking language tests which are used as gatekeeping devices to determine access to education and employment, immigrant status, citizenship, and other rights. The second goal is to show how the extent of test fairness can be demonstrated and improved using the tools of psychometrics, in particular the models collectively known as Rasch measurement. "This book will have an enormous impact on the field of language assessment. Using Rasch analysis models to explore and identify sources of unfairness, the authors make a compelling case for fairness in the design and implementation of language assessment instruments and

for justice in the interpretation and use of test results. A real strength of the book is that it guides readers through analytical techniques in an accessible way." Dan Douglas, Professor Emeritus, Applied Linguistics Program, Iowa State University.
