Fundamentals of Home Security Anthony Ekanem 2016-10-07 It has been reported that a burglary now happens every 15 seconds. As such, the chances of your own home actually being at risk from a break-in are greatly

increased, and it does not matter where you live. When people think of a break-in, they think of someone gaining entry into their home through breaking some glass or smashing down doors. Yet there are certain things which could actually extend an invitation to those intruders to make an attempt at getting into your home. There are many places which are vulnerable to attack by an intruder to your home, and therefore you must set up a routine which will provide them with less opportunities of attempting to break in. Below, we look at what are considered to be some of the weak areas in your home security routine which could help to prevent any kind of break-in from occurring. 1. Keys You may think it is a great idea, but lending keys to family and friends, as well as those people who carry out work in your home, greatly increases the chances of your keys being placed in the wrong hands. Although the people you leave the key with might be completely trustworthy, you cannot control where the keys are once they are out of your hands, and the chances of their being duplicated are greatly increased. So, it is important that you think deeply about whom you are leaving your keys with. Also, never place your keys in those "secret" places outside the home, as a smart burglar may know exactly where to look for them.

The Effect of UV Light and Weather on Plastics and Elastomers Laurence W. McKeen 2019-03-22
The Effect of UV Light and Weather on Plastics and Elastomers, Fourth Edition, provides critical data on the effect of UV light and weathering on plastics and elastomers, enabling engineers, designers and R&D professionals to select the right materials when developing plastics products for a range of industries and applications. This information will also support academic researchers and scientists in developing polymeric materials for advanced applications. Provides vital data on the effects of weather and UV light exposure on plastics and elastomers Offers practical guidance for engineers and scientists working with plastics for outdoor applications Expanded revision includes the latest data, polymer classes and newly available materials, including bio-based polymers and plastics for 3D printing

Natural Forms of Defense Against Biological, Chemical and Nuclear Threats

John Brighton 2002 The events that took place on September 11th caused Dr. John Brighton, a naturopathic health consultant, to ask himself questions about what role natural forms of healing might have in a scenario involving

weapons of mass destruction (WMD). As he examined the issues and the nature of the threat, he felt assured that a naturalistic approach could make a significant contribution in conjunction with that offered by conventional medicine. Moreover, he felt that to use both would provide a more powerful deterrent than if either were used alone. The naturalistic approach would augment the use of drugs by adding 5 extra lines of defense aimed at supporting and strengthening the immune system to deal with such a dire event. These lines include: A psychological dimension A social dimension A preventative dimension An environmental dimension A specific dimension The whole idea of this holistic strategy is to employ prevention and immune-enhancing factors in order to reduce the level of crisis to begin with. As a result, the dependency on antibiotics (there are no effective antivirals) and other valuable medical resources can be considerably reduced, and, most importantly, preserved for when they would be needed most. Another benefit of integrating these two systems would add what Dr. Brighton calls "synergistic complexity" as a way to reduce the current crisis of germ resistance to many most potent antibiotics and to provide a holistic approach to all forms of WMD. The book clarifies the scope of the threat we face by examining: The variety of biological, chemical, and nuclear threats The factors involved in the creation of WMD The uncanny capacity of microbes to develop resistance to our medications The threat of bioengineering and the creation of superbugs How synergistic complexity could provide a possible solution A chapter is dedicated to focusing on the specific nature and challenges posed by each biological, chemical and nuclear agent. This includes: A description of the agent How it causes harm How it might be used as a weapon, and the possibility of it being used How it is detected diagnostically and in the field The conventional method of care and treatment The suggested natural forms of defense including herbs, vitamins & minerals, and other natural substances and healing therapies. The book ends with a forward-looking chapter on emerging technologies that have promise of increasing our level of defense against WMD. A bibliography and a full section on resources are available.

Routledge International Handbook of Consumer Psychology Cathrine V. Jansson-Boyd 2016-11-18
This unique handbook maps the growing field of consumer psychology in its increasingly global context. With contributions from over 70 scholars across four continents, the book reflects the cross-cultural and multidisciplinary character of the field. Chapters relate the key consumer concepts to the progressive globalization of markets in which consumers act and consumption takes place. The book is divided into seven sections, offering a truly comprehensive reference work that covers: The historical foundations of the discipline and the rise of globalization The role of cognition and multisensory perception in consumers' judgements The social self, identity and well-being, including their relation to advertising Social and cultural influences on consumption, including politics and religion Decision making, attitudes and behaviorally based research Sustainable consumption and the role of branding The particularities of online settings in framing and affecting behavior The Routledge International Handbook of Consumer Psychology will be essential reading for anyone interested in how the perceptions, feelings and values of consumers interact with the decisions they make in relation to products and services in a global context. It will also be key reading for students and researchers across psychology and marketing, as well as professionals interested in a deeper understanding of the field.

The Fight Against Monsanto's Roundup Michael Cohen 2019-01-08 "We are being poisoned, and this book is sounding a well-informed alarm. Read it. Get educated and then join the thousands rising up against those who care more for profit than the health of our bodies and our earth."—Eve Ensler, New York Times bestselling author
Chemical poisons have infiltrated all facets of our lives – housing, agriculture, work places, sidewalks, subways, schools, parks, even the air we breathe. More than half a century since

Rachel Carson issued *Silent Spring* – her call-to-arms against the poisoning of our drinking water, food, animals, air, and the natural environment – *The Fight Against Monsanto's Roundup* takes a fresh look at the politics underlying the mass use of pesticides and the challenges people around the world are making against the purveyors of poison and the governments that enable them. The scientists and activists contributing to *The Fight Against Monsanto's Roundup*, edited by long-time Green activist Mitchel Cohen, explore not only the dangers of glyphosate – better known as "Roundup" – but the campaign resulting in glyphosate being declared as a probable cancer-causing agent. In an age where banned pesticides are simply replaced with newer and more deadly ones, and where corporations such as Monsanto, Bayer, Dow and DuPont scuttle attempts to regulate the products they manufacture, what is the effective, practical, and philosophical framework for banning glyphosate and other pesticides? *The Fight Against Monsanto's Roundup: The Politics of Pesticides* takes lessons from activists who have come before and offers a radical approach that is essential for defending life on this planet and creating for our kids, and for ourselves, a future worth living in.

Exposure Assessment and Safety Considerations for Working with Engineered Nanoparticles Michael J. Ellenbecker 2015-07-07 While invaluable for their uses in medicine as a drug delivery system or as an imaging agent in cancer detection, nanoparticles do present possible medical and environmental dangers. Due to the thousands of commercial and medical applications for engineered nanoparticles currently available or under development, guidelines for evaluating and controlling exposure to engineered nanoparticles are essential. Designed for EHS professionals working with nanoparticles, this important reference outlines the acceptable levels of exposure to nanoparticles and describes methods for evaluating and controlling worker exposure to engineered nanoparticles. With case studies on various nanoparticle exposures, the book sheds light on the toxicity of such nanoparticles as carbon nanotubes, fullerenes, TiO₂, and metal nanoparticles as well as routes of exposure, such as skin and the respiratory system.

Move Fast and Break Things Jonathan Taplin

2017-04-18 The book that started the Techlash. A stinging polemic that traces the destructive monopolization of the Internet by Google, Facebook and Amazon, and that proposes a new future for musicians, journalists, authors and filmmakers in the digital age. Move Fast and Break Things is the riveting account of a small group of libertarian entrepreneurs who in the 1990s began to hijack the original decentralized vision of the Internet, in the process creating three monopoly firms -- Facebook, Amazon, and Google -- that now determine the future of the music, film, television, publishing and news industries. Jonathan Taplin offers a succinct and powerful history of how online life began to be shaped around the values of the men who founded these companies, including Peter Thiel and Larry Page: overlooking piracy of books, music, and film while hiding behind opaque business practices and subordinating the privacy of individual users in order to create the surveillance-marketing monoculture in which we now live. The enormous profits that have come with this concentration of power tell their own story. Since 2001, newspaper and music revenues have fallen by 70 percent; book publishing, film, and television profits have also fallen dramatically. Revenues at Google in this same period grew from \$400 million to \$74.5 billion. Today, Google's YouTube controls 60 percent of all streaming-audio business but pay for only 11 percent of the total streaming-audio revenues artists receive. More creative content is being consumed than ever before, but less

revenue is flowing to the creators and owners of that content. The stakes here go far beyond the livelihood of any one musician or journalist. As Taplin observes, the fact that more and more Americans receive their news, as well as music and other forms of entertainment, from a small group of companies poses a real threat to democracy. Move Fast and Break Things offers a vital, forward-thinking prescription for how artists can reclaim their audiences using knowledge of the past and a determination to work together. Using his own half-century career as a music and film producer and early pioneer of streaming video online, Taplin offers new ways to think about the design of the World Wide Web and specifically the way we live with the firms that dominate it.

Give Me a Break John Stossel 2004-01-20

Ballooning government? Millionaire welfare queens? Tort lawyers run amok? A \$330,000 outhouse, paid for with your tax dollars? John Stossel says, "Give me a break." When he hit the airwaves thirty years ago, Stossel helped create a whole new category of news, dedicated to protecting and informing consumers. As a crusading reporter, he chased snake-oil peddlers, rip-off artists, and corporate thieves, winning the applause of his peers. But along the way, he noticed that there was something far more troublesome going on: While the networks screamed about the dangers of exploding BIC

lighters and coffeepots, worse risks were ignored. And while reporters were teaming up with lawyers and legislators to stick it to big business, they seldom reported the ways the free market made life better. In *Give Me a Break*, Stossel explains how ambitious bureaucrats, intellectually lazy reporters, and greedy lawyers make your life worse even as they claim to protect your interests. Taking on such sacred cows as the FDA, the War on Drugs, and scaremongering environmental activists -- and backing up his trademark irreverence with careful reasoning and research -- he shows how

the problems that government tries and fails to fix can be solved better by the extraordinary power of the free market. He traces his journey from cub reporter to 20/20 co-anchor, revealing his battles to get his ideas to the public, his struggle to overcome stuttering, and his eventual realization that, for years, much of his reporting missed the point. Stossel concludes the book with a provocative blueprint for change: a simple plan in the spirit of the Founding Fathers to ensure that America remains a place "where free minds -- and free markets -- make good things happen."
