*Tory Burch* Tory Burch 2014-10-14 Tory Burch sees the world in color, inspired by people, places, and ideas—all of which influence her brand, synonymous with print and color. In her first book, she explores what living in color means to her. The book is organized by color, each one brought to life through images of her own collections and travels; how she entertains; style icons; the works of artists, authors, and interior designers she admires; and the advice of business leaders—many of whom are interviewed within. The book also offers a glimpse into the more personal moments in Tory's life, such as family trips with her boys or the indelible ways in

which her parents, Buddy and Reva Robinson, influenced her collection, company, and philosophy. The foreword is written by Anna Wintour, artistic director of Condé Nast and editor-in-chief of Vogue, and the cover features Damien Hirst's Beautiful Primal Urges Rug, © Damien Hirst and Science Ltd., all rights reserved / DACS, London / ARS, NY 2014. Courtesy of Other Criteria. 100% of the gross proceeds received by Tory Burch LLC from the sale of this book will benefit the Tory Burch Foundation. **Physiology of Astroglia** Alexei Verkhratsky

2015-03-01 Astrocytes can be defined as the glia inhabiting the nervous system with the main function in the maintenance of nervous tissue homeostasis. Classified into several types according to their morphological appearance, many of astrocytes form a reticular structure known as astroglial syncytium, owing to their coupling via intercellular channels organized into gap junctions. Not only do astrocytes establish such homocellular contacts, but they also engage in intimate heterocellular interactions with

neurons, most notably at synaptic sites. As synaptic structures house the very core of information transfer and processing in the nervous system, astroglial perisynaptic positioning assures that these glial cells can nourish neurons and establish bidirectional communication with them, functions outlined in the concepts of the astrocytic cradle and multipartite synapse, respectively. Astrocytes possess a rich assortment of ligand receptors, ion and water channels, and ion and ligand transporters, which collectively contribute to astrocytic control of homeostasis and excitability. Astroglia control glutamate and adenosine homeostasis to exert modulatory actions affecting the real-time operation of synapses. Fluctuations of intracellular calcium can lead to the release of various chemical transmitters from astrocytes through a process termed gliotransmission. Sodium fluctuations are closely associated to those of calcium with both dynamic events interfacing signaling and metabolism. Astrocytes

appear fully integrated into the brain cellular circuitry, being an indispensable part of neural networks.
