Architecture in Uniform Jean-Louis Cohen
2011 This fascinating book offers a new

perspective on the architectural history of
the Second World War, which in previous
accounts has most often been viewed as a

hiatus between peaceful periods of production. Jean-Louis Cohen contends instead that during the years between the bombings of Guernica in 1937 and of Hiroshima in 1945, specific advances were fundamental to the process of modernization and led to the definitive supremacy of modernism in architecture. Centering the discussion on ten main themes, the author investigates various aspects of architecture's mobilization in the war years, as well as the trajectories of individual architects. He analyzes architectural developments worldwide and takes into account each of the major participants in the war, including the United States, Japan, Great Britain, France, Italy, the Netherlands, Germany, and the Soviet Union. The book not only focuses on plans, buildings, and technological inventions but also examines the many types of visual representation used for war purposes,

enhanced by a rich array of more than 300 illustrations.

Rafiqul Gani 2020-12-29 This book celebrates the life, work and influence of Professor Roger W.H. Sargent of Imperial College London. It does so through a range of original contributions that span the wide academic and industry interests of Professor Sargent. Roger Sargent passed away in late 2018, but his legacy lives on through his enormous academic tree, which traces to the early 1960s. That huge body of work has also had significant impacts on industrial practices. Roger was regarded as “the father of Process Systems Engineering (PSE)”. This area of Chemical Engineering

Silence within and beyond Pedagogical Settings Eva Alerby 2020-09-15 This book explores the significance of silence within and beyond pedagogical contexts. Silence is a complex and multidimensional phenomenon for everyday life: since schools mirror society, it is also significant in education. While silence can be experienced in a multitude of different ways, the author

reflects on whether silence itself can bear a message: is there an aspect of dialogue in silence, or is it a language all of its own? This book examines a variety of silences essential for education, examining such topics as silence and aspects of power, silent students, and the relationship between listening and silence. Drawing on a range of empirical data, the author elucidates the significance of silence in pedagogical contexts.

Disjunctive Programming Egon Balas
2018-11-27 Disjunctive Programming is a technique and a discipline initiated by the author in the early 1970's, which has become a central tool for solving nonconvex optimization problems like pure or mixed integer programs, through convexification (cutting plane) procedures combined with enumeration. It has played a major role in the revolution in the state of the art of Integer Programming that took place roughly during the period 1990-2010. The main benefit that the reader may acquire from reading this book is a deeper understanding of the theoretical underpinnings and of the applications potential of disjunctive programming, which range from more efficient problem formulation to enhanced modeling capability and improved solution methods for integer

and combinatorial optimization. Egon Balas is University Professor and Lord Professor of Operations Research at Carnegie Mellon University's Tepper School of Business.
