Modern Food Microbiology James M. Jay

2012-04-03 This fourth edition of Modern Food Microbiology is written primarily for use as a textbook in a second or subsequent course in microbiology. The previous editions have found usage in courses in food microbiology and applied microbiology in liberal arts, food science, food technology, nutritional science, and nutrition curricula. Although organic chemistry is a desirable prerequisite, those with a good grasp of biology and chemistry should not find this book difficult. In addition to its use as a textbook, this edition, like the previous one, contains material that goes beyond that covered in a typical microbiology course (parts of Chaps. 4, 6, and 7). This material is included for its reference value and for the benefit of professionals in microbiology, food science, nutrition, and related fields. This edition

contains four new chapters, and with the exception of Chapter 15, which received only minor changes, the remaining chapters have undergone extensive revision. The new chapters are 17 (indicator organisms), 18 (quality control), 21 (listeriae and listeriosis), and 24 (animal parasites). Six chapters in the previous edition have been combined; they are represented in this edition by Chapters 12, 13, and 14. In the broad area of food microbiology, one of the challenges that an author must deal with is that of producing a work that is up to date. *A First Course in Probability* Sheldon M.
