Ducati Desmoquattro Superbikes Ian Falloon 2002-06 Ducati stunned the world in 1988 when the struggling, small Italian firm unleashed its Desmoquattro -- 8-valve, desmodromic -- Superbike. The bike found success on the world's racetracks right from the start. Road-going versions soon carried that success to the general public, proving this design wasn't just another noisy prototype. The Superbikes -- 748, 851, 888, 916, and 996 -- are now Ducati's best-selling machines in the United States; and the Desmoquattro engine found its way into the company's more pedestrian series such as the Monster roadster and ST4 sport-tour. This is the comprehensive volume on Ducati's ultimate performance motorcycles and replaces the out-of-print Ducati Super Bikes: 851, 888, 916.

Medical Anthropology Andrea S. Wiley 2009 Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Gjessing Editors This volume consists of background papers and reports on discussions focused on identifying major processes that cause spatial and temporal variability in properties and concentrations of organic acids in aquatic ecosystems. Scientists in aquatic chemistry, environmental chemistry, soil chemistry, organic geochemistry, water treatment technology, forest ecology, and stream ecology collectively address four major questions: What is the composition of organic acids and how are they characterized? How are acid-base properties of "DOC" measured and modeled and how do they affect aquatic ecosystems? How do organic acids interact with solutes, surfaces, and organisms? What are the temporal and spatial variations of organic acids at the ecosystem level? This volume provides an up-to-date assessment of the state of knowledge of organic acids in aquatic ecosystems and identifies promising areas of new research that deserve the attention of all scientists who study chemical and biological processes in natural waters, where the importance of organic acids in such processes is not yet fully recognized.

The Perfect Vehicle: What It Is About Motorcycles

Melissa Holbrook Pierson 2011-01-12 "This book, a polished, winding meditation on the theory and fractiousness of motorcycles, celebrates both their eccentric history and the wary pleasures of touring."—The New Yorker In a book that is "a must for anyone who has loved a motorcycle" (Oliver Sacks), Melissa Pierson captures in vivid, writerly prose the mysterious attractions of motorcycling. She sifts through myth and hyperbole: misrepresentations about danger, about the type of people who ride and why they do so. The Perfect Vehicle is not a mere recitation of facts, nor is it a polemic or apologia. Its vivid historical accounts—the beginnings of the machine, the often hidden tradition of women who ride, the tale of the defiant ones who taunt death on the racetrack—are intertwined with Pierson's own story, which, in itself, shows that although you may think you know what kind of person rides a motorcycle, you probably don't.

The Upper Half of the Motorcycle Bernt Spiegel 2019-08-06 Bernt Spiegel's *The Upper Half of the Motorcycle* was a best-selling motorcycling book in its original German with multiple editions and printings to its credit. Now translated into English, its provocative message is available to a wider audience. Spiegel's metaphor considers the rider and the motorcycle as a single unit, the rider being the upper half. Taking a multidisciplinary approach, the author draws on anthropology, psychology, biology, physics, and other disciplines to analyze the theory and function of the man-machine unit. Motorcycle riding is seen as a junction where people have created machines for personal transport and then become so adept at using them that the machine becomes like an extension of the rider themselves. The ultimate goal for riders is the integration of the man-machine interface and subsequent skill development to the point of virtuosity. Spiegel considers the various aspects of motorcycle riding that must be understood, practiced, and mastered before virtuosity can be attained. Many anecdotes, supplementary material, and in-depth treatment of specialized topics is contained in sidebars and footnotes. Numerous diagrams and photographs illustrate

the book's principles allowing the reader to consider and develop their riding skill set.
