**A New East Asia** Kazuko Mori 2007 East Asia is normally identified as a group of countries lying along the western edge of the Pacific Ocean, but in recent years scholars have begun thinking about a new East Asia that is a community rather than a set of sovereign states. This regional community is a theoretical notion variously defined on the basis of economic or political relations, philosophical orientations, language or other criteria, with each standard producing a different set of boundaries. This book looks at the new East Asia from a Northeast Asian perspective, considering it both as a theoretical construct and a practical reality. The authors are Asian Studies specialists, mainly from Japan but with contributions from Korea and the United States, and they consider the trade and economic interaction, diplomacy, and security arrangements of East Asia. Prepared as part of a five-year research program conducted by Waseda University's 21st Century Center of Excellence for the Creation of Contemporary Asian Studies, the essays are published here in English for the first time.

**Oral Physiology** Nils Emmelin 2013-10-22 Oral Physiology contains the proceedings of the Wenner-Gren Center International Symposium held in Stockholm, Sweden in August 1971. Contributors explore common problems and trends in oral physiology, from the regulation of salivary glands and the role of electrolytes in the formation of saliva to neural mechanisms underlying salivary excretion, the effect of citric acid on parotid flow, and secretion of salivary glycoproteins. Circulation of the tongue, monitoring of oral circulation, physiology of mastication, and development of fetal gustatory receptors are also covered. This volume consists of 27 chapters and begins with a discussion of mechanisms underlying control of different types of effector cells that comprise the salivary gland. The reader is methodically introduced to the nerves to the parotid gland, electrolyte and water transport in salivary glands, neural mechanisms controlling the excretion of saliva, and how the function of salivary fibers is affected by different conditions situated along the course of the seventh and ninth cranial nerves. The next chapters focus on the effect of citric acid on the variance of the parotid flow rate, ductal transport processes and glandular effects of neurotransmitters and pharmacological agents, and neuro-effector sites in salivary glands. The book concludes by presenting experimental evidence indicating that nerve impulses can be recorded from dentine. This book will be useful for researchers and teachers not only of oral physiology, but also of odontology and medicine in general.
